Special Special Special

PALMETTO and CHARLEE SOYBEANS

As a supplement to our regular Seed Price-List we will offer to our customers two new varieties of SOYBEANS which we believe are the best all round Soybeans yet offered to the American trade. While our stocks are somewhat limited, we will offer these in No. 1 grade, power recleaned and packed in even weight bags F.O.B. this point as follows:

Palmetto ----- \$4.00 per Bu.

Charlee ----- \$4.00 per Bu.

Test for eight years carried on by U. S. Department of Agriculture on test plots near Monetta, S. C., shows the CHARLEE average yield to be 16.1 bushels per acre, ranging from 11 to 22 bushels every year per acre.

On the same plots and for six years test under same supervision, the PALMETTO average yield was 16.8 bushels per acre, ranging from 12.8 to 20.7 bushels per acre.

Under same conditions and supervision, the average yield on Biloxis were 10.2 bushels per acre; Ootootans 9.8 bushels per acre, and Laredos 9.3 bushels per acre.

As a bean for making hay, we believe the Palmetto and Charlee to be unsurpassed, test conducted under supervision of U. S. Department of Agriculture on test plots near Monetta, S. C., for green weights shows 5 years average for Palmetto 7.5 tons per acre; Charlee 7.2 tons; Biloxis 5.1 tons; Laredos 4.2 tons; Ootootans 5.2 tons per acre.

Both varieties are earlier than the Ootootan, but since the Charlee is about 10 days later than the Palmetto, we would suggest planting half of the crop in each, hence all of the hay crop would not have to be harvested at one time.

Other features in favor of the CHARLEE and PALMETTO Soybeans is that a bushel of seed will plant as much as a bushel of Ootootans, one bushel being plenty to seed three acres for hay. We have testimonials to the fact that crops planted after these beans will grow off faster and make more than if planted after other varieties.

One special great feature is that for five years in our own county here, the worms have failed to eat these beans, but have completely ruined Ootootans planted on same plantation. The quality of hay is excellent, stock will eat it clean even the stems. Every farmer in this county that has tried these beans is carried away with results. We are gratified in offering these to our customers, our only regret is that seed supply is limited.

Yours very truly,

MURPHY & PALMER
